

**DECISION RECORD
and
FINDING OF NO SIGNIFICANT IMPACT
for the
NORTH FORK LITTLE CAMPBELL CREEK BRIDGE**

I. Decision:

It is my decision to authorize construction and installation of a replacement bridge on Campbell Tract over the North Fork of Little Campbell Creek. The bridge will be constructed in Anchorage, Alaska and ground transported to the site when trail conditions are optimal. Erosion barriers will be placed around the active construction area to reduce erosion into the stream. The location of the bridge is Section 3, T. 12 N., R. 3 W., Seward Meridian (Latitude 61° 09.362, Longitude 149° 47.535).

II. Rationale for the Decision:

The decision to authorize the construction of the North Fork Little Campbell Creek bridge will provide a safe stream crossing by emergency vehicles and recreation users. This decision does not result in any undue or unnecessary environmental degradation.

The lands are within the boundaries of the South-central Management Framework Plan (MFP), dated March 1980. The Management Plan for Public Use and Resource Management on the Bureau of Land Management Campbell Tract Facility (June 1988) identifies the project area as part of the Dispersed Recreation Zone. The management objective for a Dispersed Recreation Zone is to allow and enhance non-motorized, dispersed recreation uses where compatible with administrative use of the airstrip, the communication sites, access roads, and to allow new trail development as needed.

III. Finding of No Significant Impact (FONSI):

Based on the analysis of potential environmental impacts contained in the attached environmental assessment, I have determined that impacts are not expected to be significant and an environmental impact statement is not required.

IV. ANILCA Section 810 Compliance:

The decision will not significantly restrict subsistence uses, decrease the abundance of subsistence resources, alter the distribution of subsistence resources, or limit subsistence user access from currently existing conditions. No further analysis is necessary at this time.

V. Adverse Energy Impact Compliance:

This action has been analyzed as required by Washington Office Instruction Memorandum 2002-053 to determine if it will cause an adverse impact on energy development. The action will not have an adverse direct or indirect impact on energy development, production or distribution. The preparation of a Statement of Adverse Energy Impact is not required.
